ENGLISH PRESENTATION

PYTHON

Simple code. Useful tools.

A short talk about a programming language

{ }

What is Python?

Python is a programming language.

We use it to tell a computer what to do.

FREE

EASY TO READ

MANY USES

Python code can be short and clear.

main.py

```
print("Hello, world!")
```

OUTPUT

```
Hello, world!
```

Who created Python?

GUIDO VAN ROSSUM

The creator of Python

He worked in the Netherlands.

He wanted simple, readable code.

1989

Work started

1991

First public release

Source: Python documentation

Why do people like Python?

01

CLEAR CODE

The code is easy to read.

02

MANY LIBRARIES

Ready-made tools save time.

03

WORKS EVERYWHERE

Windows, Linux and macOS.

Short code can still do real work.

Where do we use Python?

Websites & APIs

A server sends data to an app.

Automation

A script can do boring tasks.

Data

Python can read and check data.

AI

Python can work with AI models.

My first Python program

EXAMPLE 01

Say hello

The print function shows text on the screen.

main.py

```
print("Hello!")
```

OUTPUT

```
Hello!
```

1 line of code → 1 result

A useful mini project

EXAMPLE 02

Calculate a price

We have 3 items.
One item costs 100.

Python can do maths for us.

main.py

```
price = 100
count = 3
print(price * count)
```

OUTPUT

```
300
```

Python can make a decision

EXAMPLE 03

If / else

The program checks an age.
Then it prints a message.

main.py

```
age = 18

if age >= 18:
    print("Access OK")
else:
    print("Access denied")
```

OUTPUT

```
Access OK
```

Python and other languages

Python

Quick to write

USED FOR

Scripts, websites, AI

Java

Used for many apps

USED FOR

Business apps, servers

C++

Good for fast programs

USED FOR

Games, system software

Each language is good for different tasks.

Thank you!

Python is a good first language.

We can make real tools with simple code.

Do you have any questions?(pls, no)

```
print(":)")
```
