The CPU

Central Processing Unit

by Artemiy

What is the CPU?

The CPU is the brain of the computer.

It thinks. It controls. It calculates.

Two main parts

CU

Control Unit

The boss

ALU

Arithmetic-Logic Unit

The calculator

The Control Unit

It reads instructions. It sends signals.

Counter

Chooses the instruction

Register

Holds the instruction

Decoder

Reads the instruction

Clock

Gives the time

The ALU

It does math. It compares numbers.

Adder

Plus, minus,
times, divide

Comparer

More, less
or equal?

Accumulator

Holds
the result

How it works

1

Read

2

Decode

3

Execute

4

Save

Again and again. Very fast.

Thank you!

Any questions?
